

Novikoff

Wood is a beautiful and natural resource. The strength and durability of wood has been relied upon for generations to supply heat, shelter and furniture. We are continually exploring innovative ways to use new products and technology to protect and preserve our planet's natural resources.

Product Durability

Perhaps the best thing we do for the environment at Novikoff is to build products that last. Novikoff has always had a reputation for building durable, long-lasting furniture. We pride ourselves in our construction methods and the durability of our raw materials. It is not unusual to see some of the products built in 1960 (the beginning of Novikoff) still in use today.

Veneers & Hardwoods

Novikoff carefully selects its veneer and hardwood suppliers who only use wood coming from sustainable, plentiful and well-managed forests. Novikoff obtains only North American species for our standard product offerings. Novikoff does not purchase any wood species identified to be from rainforest regions where clear-cutting is practiced.

Air Emissions

Novikoff has dramatically reduced its VOC emissions by 40% over the last 5 years. As new products, technologies and methods are introduced, Novikoff evaluates and implements many of these improvements into its operations. Additionally, only water-based glues are used in our veneer pressing operations.

Waste

Novikoff has a strong focus on preventing and reducing waste. One of our initiatives is reducing veneer waste. We order veneer faces cut to size which allows for maximum yield on veneer products. We also purchase veneer faces which match up exactly to our standard products. Veneer faces that fit exactly to our end panels, modesty panels and desk tops reduce waste significantly.

Novikoff blanket wraps most shipments in an effort to reduce packaging materials entirely.

Particle Board

Our supplier only uses wood products from sustainable well managed forests. Our particle board consists of wood products and recycled materials.

Leather

Our leather scraps are sold to a local wallet manufacturer.
